## Experience

---

### Sberbank PJSC

June 2018 – present

*Senior Software Engineer*

*Moscow, Russia*

- Addressed a number of legal issues by developing from scratch and launching a service to control actions with various types of user consents. Designed the service to be usable from other company's microservices and front-end widgets.
- Increased the speed of the sensitive mortgage cases by 50% by implementing, shipping and supporting the services that automate the process. Utilised message-driven architecture to provide high availability and reliability.
- Prototyped, organized, and led the development of an ETL-based advisory system to track skills of engineers in the company, bus factor of their teams, and other metrics. The system improved involvement of engineers, dev leads and CTO in the development process.
- Created a performance testing process from scratch. It is used to simulate the expected load and thus to keep our services 99.99% available during peak load. Successfully combined jMeter, APM, cloud and monitoring tools to reach the goal.
- Curated development of the corporate portal Java team, applied microservices approach to deliver new features faster and safer. Mentored 2 back-end developers.
- Collaborated with back-end & front-end developers of other teams to design REST API contracts. Communicated directly with CTO and Team Leaders, worked with feedback. Applied clean code/architecture best practices on work.

### Sberbank-Technologies JSC

October 2015 – June 2018

*Leading Software Engineer*

*Moscow, Russia*

- Eliminated possibilities of fraud and saved company millions of rubles by introducing blockage of working from two windows. Fixed security issues by updating the encryption library.
- Implemented individual currency conversion and interest rates features, that attracted hundreds of new customers and increased loyalty of existing ones. Gained experience with Enterprise Serial Bus architecture for integration with other systems.
- Boosted overall development productivity by extracting a service from the monolithic application with support of a dedicated DB and distributed transactions support.
- Successfully migrated functionality of the Deposit subsystem of the Bank Offices and Online Banking systems to microservices achieving 30% faster feature delivery. Analyzed, and fixed bugs and incidents on both front-end and back-end.
- Sped up the development lifecycle by at least 20% and decreased the number of bugs by introducing git-flow with mandatory code review and Kotlin into the project. Co-authored, supported, and advocated the team agreement of architecture, API designing, and code style.
- Interviewed over 30 candidates for Java developer position. Onboarded, and mentored 3 new hires.

### AVP-Technology LLC

October 2014 – June 2015

*Software Engineer*

*Moscow, Russia*

- Added new features, found and fixed bugs, refactored more than 200000 lines of unstructured and difficult-to-maintain legacy code. Updated and structured the project documentation.

### Open-Retail LLC

June 2013 – March 2014

*Web Developer*

*Moscow, Russia*

- Developed and launched 3 Internet shopping websites.
- Created a package solution for a CMS e-commerce websites consisted of cross-platform mobile app and its back-end.

## Education

---

### Peoples' Friendship University Of Russia

September 2011 – July 2013

*Master's Degree in Control in Technical Systems*

*Moscow, Russia*

- A 3rd-degree diploma was received for winning the contest with a paper called "Cloud computing for solving control problems with the help of network operator method"

### Peoples' Friendship University Of Russia

September 2007 – July 2011

*Bachelor's Degree in Automation and Control*

*Moscow, Russia*

## Technical Skills

---

**Languages, frameworks:** Java, Kotlin, Spring, Micronaut, MERN

**Persistence:** PostgreSQL, MySQL, MongoDB, JOOQ, JPA, JDBC

**Integration:** Feign, RestTemplate, RabbitMQ, IBM MQ

**Monitoring:** Grafana, InfluxDB, Prometheus

**Build, tools:** Maven, Gradle; Git, IntelliJ IDEA

**CI/CD, Testing:** Jenkins, Docker, K8S; JUnit, Mockito
