

ANTON SHUSTIKOV

+905517454055 | [github](#) | Montreal | www.linkedin.com/in/antonshustikov/ | ShustikovAnimation@gmail.com

- I am a highly motivated and enthusiastic Java Junior with a strong passion for programming and software development

EDUCATION

JavaRush, 2022 | Software Testing Fundamentals, 2022 |

Udemy: Spring: Beginner to Guru by John Thompson | RESTful Spring Boot by Sergey Kargopolov |

Spring & Hibernate by Chad Darby | Advanced Java by Neil Alishev

Mari State University, Yoshkar-Ola

Sept 2008 - Aug 2012

Bachelor of International Relationships and affairs

Non-commercial development:

Jan 2022 – Present

- Telegram subscription bot ([github](#)). This is a Telegram bot that allows users to subscribe to a group of posts. Users can view a list of groups they have subscribed to, unsubscribe from any group of posts, set the bot to inactive mode and stop receiving notifications, or reactivate notifications at any time. Bot tracks updates to articles on the JavaRush website and sends a notification to the user. It provides a user-friendly and efficient way for users to manage their subscriptions and stay updated on their preferred content. This application is deployed on an Amazon Web Services (AWS)
- Library Data ([github](#)). This is an online library, a CRUD (Create, Read, Update, Delete) application where users can add, edit, and delete person cards and books. They can also assign books to specific individuals. It provides a user-friendly and efficient way to manage and organize library resources.
- Telegram bot file hosting ([github](#)). This is a file-sharing service that allows registered users to upload text, documents, or photos and receive a download link in return. If a user is not registered, the service will prompt them to register before being able to access the service. It's a secure and easy way to share and access files with authorized users.
- URL shortener ([github](#)). This is a link-shortening service that transforms lengthy URLs into shorter, more manageable links. This can be useful for a variety of purposes, such as making links more shareable on social media, or for tracking clicks on a specific link. It is a simple and efficient solution that can help to streamline the process of sharing and managing links.
- SensorRestServer ([github](#)). This API service allows you to easily add a sensor and retrieve its measurements through the use of a tool such as Postman or any other preferred application.

TECHNICAL SKILLS

Java(OOP, Collections, Multithreading), Spring MVC, JPA/Hibernate + JDBC, Spring Boot, Spring Data, Spring Security, MySQL, Postgres, MongoDB, Redis, Docker, Git, Flyway, Liquibase, Rabbit MQ, Kafka

WORK EXPERIENCE

Founder | Drum stick manufacturing company

Apr 2018 - Jan 2022

- Planning and establishment of a drumstick production facility from the ground up
 - Designing and constructing CNC machines, from conceptualization to assembly
 - Developing and implementing specialized sewing machines to optimize production process
 - Seeking out potential customers
 - Maintaining our social media presence and fostering communication with both legal entities and individual clients.
- Throughout the project, I was driven by the desire for optimal efficiency, always seeking a harmonious balance between the premium quality of our products and their competitive pricing. As a result, I assembled a team of five talented individuals, whom I led with dedication and determination. Our production flourished and continued to grow year after year, as we consistently exceeded our production targets and met the demands of our valued customers

System engineer | School №5 "Usual Wonder"

Sept 2015 - Aug 2018

- Configuration and administration of Windows OC
- Installation of OS and application updates for smooth operation
- Installation and configuration of new hardware and software products
- Maintenance of office equipment
