Sep 2020 – Jun 2022

High-school degree

School #30, Astana

Sep 2022 – Jun 2025

Software Engineering – Bachelor's degree

Astana IT University, Astana

Personal Info

As an experienced Python backend developer, I have been utilizing Django for several months. Currently, my team (QUSH) and I are developing a sports announcement platform written entirely in Django. Through this project, I have gained invaluable experience and expertise in the field. Check out our progress at <https://qush-product.com>.

Project Experience

Project 1: Blog User using Flask.

Backend Developer

Duration: 1 month

Technologies used: Python, Flask, HTML, CSS, JS

Description:

- I have developed a user-friendly blog post platform that engages and informs readers
- The platform prioritizes security and efficiency with authorization and registration capabilities incorporated
- PostgreSQL is used for storing and managing data, ensuring reliable and efficient storage and retrieval of information
- The platform provides a seamless user experience, showcasing my technical proficiency and dedication to creating high-quality web applications

Project 2: Sports platform. (Team project)

Backend Developer

Duration: 20th January – still going

Technologies used: Python, Django, HTML, CSS, JS

Description:

- Our team at QUSH has successfully developed the MVP for our startup project
- Our platform is designed to help sports enthusiasts connect and play sports together
- Users can create announcements that are visible to other users on the platform
- We have integrated a map and messenger feature into the platform, allowing users to see specific announcements and communicate with each other at any time
- We are in the process of adding new features to the platform, such as creating teams and tournaments
- Our startup project has the potential to fill a gap in the market and bring sports enthusiasts together
- We are excited to see how our platform evolves and grows as we continue to work on improving it.
