PROFESSIONAL EXPERIENCE

KTS STUDIO

Moscow, Russia

Frontend Developer

Apr 2021-Present

- Lead frontend developer in a team of 4 frontend developers. Managed and resolved 195+ new features and bug fixes. I helped my trainee become a junior+ by creating a growth plan.
- Leading job interviews. Created a structured interview plan with a question set which helps with job offer decisions. Interviewed 10+ candidates, 3 of them hired and working in our company for more than a year
- Company's frontend school enhancement. I designed a new homework with automated checks. It enabled our company to increase 120% the number of students on the course and hire twice more interns after it.

HR System for X5 Retail Group (over 250.000 employees)

- Developing new automated business processes, bug fixes, and project optimization. Examples:
 - Annual planning and recalling of employee vacations; projected the new system of MobX data stores for vacation processes. It saved 1000hrs/month of HRS and tons of paper for documents.
 - Bank details filling form; wrote complex validators for every field. It reduced change rejections by 70% and shortened the salary payment unavailability period twice.
- Make releases; incident management; interaction with 6+ teams that develop 35+ micro frontend modules.
- Changed UI tests writing/running approach which sped up by 30% covering

VK (EX. MAIL RU GROUP)

Moscow, Russia

Frontend Developer

Jul 2019 - Apr 2021

- Developing features for email service; writing UI/unit tests & test plans; creating SLA and product metrics dashboards such as observability of payments, files uploading funnels, and error tracking with alerts.
Examples:
 - To overcome the 2GB attachment size limit initiated and pushed the creation of a new Cloud OpenAPI that enabled 10+ teams to integrate with it. I projected a cross-service feature of uploading attachments into the cloud from the email service. It brings +3% to the monthly earnings of the cloud.
 - To improve the car fines payment I developed group payment from letters with JSON-LD. A/B tests showed retention growth and reduced user journey by 4 times compared to the other services.
 - A no-code email constructor enabled product managers and marketers to create promo emails. It reduced costs by 3 times per mailing and shortened the term of new email mailing by 5 times.
