Ukrainian
Russian
English

EXPERIENCE

Flask Bookshop, *2021-04 – 2021-06*
- Created a RESTful API application using Flask. JWT token was used for authentication and role-based access.
- PostgreSQL was used as a database, Redis was used for caching and task queue.
- Celery was used for asynchronous tasks such as sending email. Elasticsearch was used for searching query.
- Development also required Docker, writing unit-tests and Travis CI.
- Production version of application uses Gunicorn and NGINX.

Django Blog*, 2020-07 – 2020-12*
- PostgreSQL was used as a database.
- Django-template was used for SSR, jQuery was used for AJAX calls.
- Added Docker, Travis, logging and unit-tests.
- Added role-based access.
- Production version of application uses Gunicorn and NGINX
