SUMMARY

Highly skilled Senior Frontend Engineer with over 6+ years of experience in developing and designing user-friendly websites and web applications. Strong expertise in JavaScript. Proficient in responsive design, cross-browser compatibility, and mobile technologies (hybrid or native). Skilled in creating performant and testable code.

SKILLS

- Expert in JavaScript, Vue and React
- Ability to design secure and testable code
- Experience with ReactJS, TypeScript, Webpack, Jest, HTML, CSS, SASS, Cordova, Electron, jQuery
- Mobile-first mindset and experience in mobile technologies (hybrid or native)
- Strong experience in Agile frameworks (Scrum/Kanban, TDD, DDD)
- Solid experience with performant web development
- Expert in troubleshooting and large codebase navigation
- Strong leadership and communication skills
- Strong experience with code reviews, code coverage, deployment and sprint rituals

PROFESSIONAL EXPERIENCE

Front-End Developer

FlexMade   Kharkov, Ukraine   📅11/2020 - Ongoing

- Responsible for developing new functionality and optimizing the application's architecture for flexibility in long-term project support, reduced technical debt by 25%.
- Implemented a virtual assistant for sports shoe recommendations. The code architecture and solutions adopted allowed for successful and rapid changes in all stages of production with complex animation and advanced video.
- Improved the architecture of the app, which improved reliability and depth of code reuse, reduced legacy code by 60% with unit tests resulting in 90% test coverage.
- Optimized Webpack settings, which resulted in a 120% reduction in build time and a 5x reduction in incremental build time in some cases.
- Training new developers.

Front-End Developer

IT2.0   Kramatorsk, Ukraine   📅10/2016 - 11/2020

- Served as a senior front-end developer and team lead at a startup BPM system project, where I was responsible for developing the front-end application's architecture and was part of the API data exchange development team. Collaborated closely with the design team, QA team, and product managers.
- Conducted research on the project's weak spots and developed improvement plans, such as improving the project's build system, adding and configuring Webpack and Gulp, adding a unit testing system and covering critical functionalities with tests, developing a chat module for the CRM system, and creating a plan for improving the application's architecture.
- I implemented a SIP telephony module using WebRTC, fixed bugs and expanded the functionality of the "Simple Business" CRM system.

EDUCATION

Master degree in Mechatronics, Robotics, and Automation Engineering

Donetsk National Technical University   Donetsk, Ukraine   📅2003 - 2008
