TECH SKILLS

Programming Languages: JavaScript, TypeScript, HTML, CSS, Java, Groovy
Frameworks, Libraries and Technologies: React.js, AngularJS, Node.js, WebPack,, Git, jQuery, SASS/SCSS, Bootstrap

WORK EXPERIENCE

PJSC SBERBANK

Frontend Engineer   *August 2021 – September 2023*

- Developed a reliable and user-friendly cross-browser SPA (single-page application) for collecting large amounts of data using JavaScript (ES6+) and React.js that was highly praised by users, scoring 4.8/5 stars in an internal survey.
- Participated in the creation of a custom UI-component library to implement a unified interface development standard for all frontend engineer teams within the bank, resulting in increased application security and expedited development.
- Implemented the interaction of the application's interface components with the SAP database system using RESTful API tools. Debugged the entire cycle of request transmission through developer tools and internal SAP transactions.
- Migrated the old version of the application from legacy code to a new architecture using the MVP pattern and applying OOP principles. Ultimately, reliability of the application was increased and cost of further development was reduced.
- Collaborated closely with a cross-functional team of designers and analysts to create a responsive and user-centric design for the application that helped ensure a seamless user experience and achieve top-rated user satisfaction scores.
- Developed and implemented integrations linking diverse banking systems by leveraging a robust middleware layer powered by Java that facilitated seamless data flow and communication, enabling the inclusion of a data audit module.
- Conducted comprehensive demo presentations for key stakeholders and product owners, thereby facilitating the timely integration of critical changes into the project, contributing to the successful delivery of high-quality solutions.
- Actively participated in Agile ceremonies, including retrospectives, sprint planning, and daily stand-ups. Utilized tools such as Jira and Confluence to streamline workflows, track issues and maintain comprehensive documentation.

BIG CITY PRODUCTION

Entry-Level Frontend Engineer   *May 2019 – August 2021*

- Developed websites for various segments of the company's operations, implemented traffic-generating methods, and established analytics systems, resulting in a significant increase in conversion and sales rates of up to 40%.
- Translated Figma design templates into semantic HTML5 markup, utilized CSS3 for web page styling, and ensured pixel-perfect accuracy, resulting in visually appealing and responsive user interfaces that enhanced the user experience.
- Delivered comprehensive technical support and administered websites, overseeing hosting management, server configurations, and the establishment of a robust corporate email system that ensured seamless communication.
- Responsible for content management, including editing and publishing content, tracking and analyzing web analytics to gain insight into user behavior, enabling data-driven decisions to continually improve and enhance the user experience.
- We introduced sales automation by integrating the website with the Bitrix24 CRM system, which simplified customer relationship management and improved sales processes, resulting in a 25 percent increase in sales.

EDUCATION

Moscow State University of Transport
Bachelor's Degree in Construction (Real Estate Development)   *September 2017 – June 2022*

ADDITIONAL EDUCATION

School 21
Computer Science   *June 2019 – August 2021*

ACTIVITIES AND INTERESTS

Activities & Interests: football, running, fitness, chess, live music, darts
Volunteer Work: Green Marathon 2023 (All registration fees of participants will be directed to planting trees).
Visa Status: Permanent Resident
