About Me

In Frontend development, I am attracted to the "magic" of creating websites and applications that solve problems and enhance company operations. I believe there are endless opportunities for self-development and improving the quality of products in this field, with the only limitations being the developer's level of competence.

Apart from my professional interests, I enjoy activities such as going to the gym, riding a bike, and reading fiction books.

Experience

While I don't have commercial experience as a Front End Developer, I have gained valuable skills and hands-on experience through personal projects. My notable project includes a comprehensive To-Do List application where I utilized HTML, CSS, and JavaScript to create an interactive user interface. I implemented a range of features such as task management, API integration with JSON server for data persistence, and responsive design for optimal user experience. Through these projects, I have demonstrated my ability to work with front-end technologies, collaborate with APIs, and apply modern development practices.

Education

2020

Lviv Polytechnic National University

Bachelor degree

Currently pursuing a Bachelor's degree in Computer Engineering, 3rd grade, . Gained a solid foundation in computer science concepts and technologies, including programming, algorithms.

2021

Green Forest

Successfully completed English courses at Green Forests, achieving B2 level proficiency.
