Summary

I've been working in hospitality industry for over 10 years and decided to change my profession because of the lack of development perspectives. Nowadays, IT is one of the most dynamic industries, which will always challenge me as an IT professional never stops learning and must always stay on a top of the latest technological trends in order to be successful in the field. I want to become a professional specialist and be a part of a team as well as improve and use my professional skills in the best possible way for achieving the company's goals.
